-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-5 and 10-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Wells (US 114,736). Wells discloses a shaft with locking jig (hexagon cross section top end) and an auger stirring head (c c) at a second end (the bottom end) wherein the auger stirring head is substantially cylindrical shaped and extends laterally from the shaft, and wherein the auger stirring head includes twisted concave surfaces on anti-parallel surfaces forming a blade set (see Figs. 1-3). The angular rotation of the twisted concave surface is about 20 degrees from the axis (see Fig. 2). The shaft has a circular cross section at the very bottom. The shaft is solid (see Fig. 3).

3. Claims 6, 7 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Barnard et al. (US 4, 946,287). Regarding claim 6, Barnard ('287) discloses a mixing and stirring device comprising a shaft (16) with a locking jig (18) at the first end and a tear drop stirring head (17) at the second end. The shaft has a circular cross section (see Fig. 4). Regarding claim 9, the shaft is hollow (see Figs. 3 and 4).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1723

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Barnard ('287). The device of Barnard ('287) was discussed above. The size of the device is not disclosed. It would have been obvious to one of ordinary skill in the art to have select a size based upon amount of material intended to mixed. See *In re Rose* 105 USPQ 237 (CCPA 1955) regarding the obviousness of selecting a size.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
